

Introduction

This project analyzes the Superstore dataset to extract business insights and build predictive models using machine learning.

Dataset

The dataset includes sales, profit, customers, products, and regional information.

Methods Used

- Data Cleaning
- Exploratory Data Analysis
- Machine Learning Models
- Clustering
- Forecasting

Tools

Python, Pandas, NumPy, Scikit-learn, XGBoost, Plotly, Streamlit

Insights

- Sales trends analyzed
- High-value customers identified
- At-risk customers detected
- Forecasting applied for revenue prediction

Conclusion

This system helps in data-driven business decision-making using AI techniques.
